

iPad Tips & Tricks – Share Photos

When viewing your photos, you can quickly share multiple images via email or copy them to a new message. While looking at all your photos, tap the  icon and then select the photo you want to share by tapping them.

Once you've made your selection, tap either **Share** or **Copy**. Share allows you to send photos via email or via iMessages.

If you choose more than five photos then you can only select copy and paste them into other apps like Notes.
