

iPad Tips & Tricks – Split Keyboard

Typing with two hands can be awkward on the iPad, as the center keys are too far to reach easily. Instead, you can use the **Split Keyboard**.

To use this, place your thumbs in the center of the keyboard and swipe them away to the edge of the screen. This splits the keyboard so half appears on each side of the screen.

To return to the joint keyboard, tap and hold the hide keyboard icon and then tap **Dock and Merge**. The keyboard will return to its original form at the bottom of the screen.
